ABSTRACT

A narrative summary and detailed 1982 statistics on social work programs, students, and faculty are presented. Data were obtained from a total of 292 programs accredited by the Council for Social Work Education (CSWE). Information is provided on: the geographic distribution of social work programs; number of programs and faculty by type of institution, level of program, and size of institutional enrollment; percentage of full-time faculty members' time in doctoral programs; faculty members' educational background, tenure, rank, and personal characteristics by level of social work program; faculty members' primary resonsibility; salary in relation to sex and ethnicity; student applications and enrollment in programs; students' age, sex, and ethnicity; students' primary field of practice, and student financial aid. In addition, information is provided for each college, including the following: baccalaureate students' ethnicity and sex by year in school; number of students awarded Bachelor of Social Work degrees by sex and ethnicity; application and admission rates; masters' degree students enrolled by ethnicity, age, and sex; master's degree students by primary field of practice or social problem concentration. A list of graduate and baccalaureate social work programs accredited by CSWE are appended. (SW)

FOREWORD

Statistics on Social Work Education is published annually by the Council on Social Work Education to provide colleges and universities, the profession of social work, and the communities they serve with basic data on social work education in the United States. Included are descriptive statistics on programs, faculty and students. Most information is reported as of October 1, 1982. Information on number of students receiving degrees refers to the academic year, 1981-82. Gratitude is expressed to Denise Waterman of the Council staff for her splendid assistance in data processing. Her task was particularly difficult, and all the more appreciated, because of the many problems that arose in connection with the substantial revisions made in this year's data gathering. Appreciation also is extended to the members of the ad hoc study committee of the Council of Deans, who made special contributions in reviewing and revising the data collection effort. Harold Demone, Rutgers University, David Hardcastle, University of Kansas, and Sheldon Siegel, University of Cincinnati, presented at the 1982 Annual Program Meeting of the Council the findings of their survey of deans regarding perceived problems and suggested revisions in the annual data collection and reportage effort. This provided a springboard for a meeting in New York, at which Harold Demone, Joseph Vigilante, Adelphi University, and Ruth Young, University of Maryland reviewed problems in the data base and planned changes in this year's instrumentation and reportage.

INTRODUCTION

The data in this report were supplied by all CSWE-accredited graduate social work education programs and 282 (87.3%) of the 323 CSWE-accredited baccalaureate programs in the United States. There are 87 CSWE-accredited master's programs. Four more are in candidacy for accreditation. Fifty-four master's programs report being administered jointly with CSWE-accredited baccalaureate programs. For ease of reference, the 54 jointly administered programs will be labeled "joint." All accredited master's and baccalaureate programs are listed in the Appendix.

The data on graduate students separate out master's and doctoral students. There are 44 social work doctoral programs in the United States, 43 of which have CSWE-accredited master's programs and one of which offers only a doctoral program and therefore is included only in the tables on doctoral students. (Doctoral programs are not accredited by CSWE.) Separate data also are provided on baccalaureate students. In regard to the total population sizes of baccalaureate students, readers should bear in mind that the response rates from baccalaureate programs fluctuate from year to year. The figures reported in any given year underestimate the true population size of baccalaureate students, and changes from year to year should be interpreted cautiously.

The descriptive statistics on programs, faculty and students in this annual report tend to remain the same each year. However, each issue contains some refinements as new problems are identified and resolved in the data base and as social work educators need new kinds of information. The changes made in this year's report are substantial, largely in response to the impact of the ad hoc study committee of the Council of Deans, as described in the Foreword. Data reported for the first time this year include: (1) the percentage of faculty members with higher degrees who also hold a master's degree in social work; (2) the percentage of time faculty members are assigned to classroom and field instruction, advisement, conducting research, committees, and administration; (3) the percentage of salary from internal university sources; (4) the maximum number of students permitted to enroll per course section; (5) applications and admissions to part-time programs; (6) fields of practice and social problem breakdowns of classroom concentrations, in combination with methods concentrations; (7) field practicums in school social work and industrial social work; (8) financial grants awarded from specified federal agencies; (9) financial aid from formal loan programs, work study, or research or graduate assistantships, and (10) financial aid that is and is not paid by field instruction agencies. Two trends highlighted in this report are the continuing, steepening decline in applications for admission to first-year status in master's programs and decreasing full-time enrollments in baccalaureate and master's programs. Other trends also are noted.

Geographic Distribution

The geographic distribution of the 292 respondent programs is displayed in Table 1. The midwest (Region 5) has the largest number of programs and faculty members. Region 2 has the most faculty members in graduate or joint programs. The Middle Atlantic and southeastern areas (Region 3 and 4) also have a relatively large number of programs and faculty members at both graduate and baccalaureate levels. Regions with relatively small concentrations of programs and faculty members at both levels include the northwest (Region 10) and the Rocky Mountain states (Region 8). Region 1 (New England) and Region 9 (the far west) have somewhat below average numbers of baccalaureate programs and faculty members. Region 7 also has a relatively low number of faculty members in baccalaureate programs. All of these geographic figures should be considered in light of the population sizes in the various regions.

TABLE 1

Number of Education Programs and Faculty by Geographic Region and Level of Program

	LEVEL OF PROGRAM							
	Graduate Only		Joint		Baccalaureate		Total	
Region*	Programs	Faculty	Programs	Faculty	Programs	Faculty	Programs	Faculty
1	5	230	1	17	13	94	19	341
2	6	324	6	293	18	104	30	721
3	3	80	8	307	30	140	41	527
4	6	143	7	173	35	157	48	473
5	4	147	13	395	42	237	59	779
6	5	107	4	85	21	103	30	295
7	1	50	5	142	18	89	24	281
8	2	61	1	24	11	73	14	158
9	3	112	6	170	10	70	19	352
10	0	0	3	107	5	43	8	150
Total	35	1,254	54	1,713	203	1,110	292	4,077

*The regional classification is based on the federal regions of the U.S. Department of Health and Human Services. The States in each region are as follows:

Region 1 - Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont
Region 2 - New York, New Jersey, Puerto Rico, and the Virgin Islands
Region 3 - Delaware, District of Columbia, Maryland, Pennsylvania, Virginia and West Virginia
Region 4 - Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina and Tennessee
Region 5 - Illinois, Indiana, Minnesota, Michigan, Ohio, and Wisconsin
Region 6 - Arkansas, Louisiana, New Mexico, Oklahoma, and Texas
Region 7 - Iowa, Kansas, Missouri, and Nebraska
Region 8 - Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming
Region 9 - Arizona, California, Hawaii and Nevada
Region 10 - Alaska, Idaho, Oregon, and Washington

Institutional Characteristics

Most programs are in state colleges or universities. Table 2 shows that these institutions contain 57% of all programs and 65% of graduate or joint programs. However, at the baccalaureate level, the distribution of programs between private and public auspices is closer, with 54% of respondent programs in public institutions. Most baccalaureate programs with private auspices continue to be in church-related institutions. Most graduate programs with private auspices are not in church-related institutions. All but three programs in public institutions are in state colleges or universities. This year's distribution of programs and faculty by institutional auspices is very similar to last year's in all respects.

TABLE 2

Number of Education Programs and Faculty by Institutional Auspices and Level of Program

Institutional Auspices	LEVEL OF PROGRAM							
	Graduate Only		Joint		Baccalaureate		Total	
	Programs	Faculty	Programs	Faculty	Programs	Faculty	Programs	Faculty
Public								
State	17	476	41	1,208	108	682	166	2,366
Other	1	70	1	34	1	6	3	110
Private								
Church-related	2	77	6	174	76	348	84	599
Other	15	631	6	297	17	71	38	999
Not reported	--	---	--	-----	---	---	1	4
Total	35	1,254	54	1,713	202	1,107	292	4,078

Non-ethnic coeducational colleges or universities contain most programs, including 85.7% of the graduate only, 96.3% of the joint, and 87.2% of the baccalaureate programs. Eleven (5.5%) baccalaureate programs and three (3.4%) graduate/joint programs are in non-ethnic women's colleges. Eleven (5.5%) baccalaureate and three (3.4%) graduate/joint programs are in Black coeducational institutions. Four baccalaureate and one graduate/joint programs report other affiliations.

TABLE 3

Number of Social Work Education Programs by Size of College or University Enrollment and Level of Program

Size of Enrollment	LEVEL OF PROGRAM			
	Graduate Only	Joint	Baccalaureate	Total
Under 2,000	9	4	65	78
2,000 - 4,999	0	1	39	40
5,000 - 9,999	5	8	48	61
10,000 - 19,999	7	10	39	56
20,000 and Over	14	31	12	57
Total	35	54	203	292

Graduate and joint programs are more frequently found in institutions with larger student enrollments, while baccalaureate programs are more likely to be located in institutions with smaller student enrollments. Table 3 displays the above pattern. It also shows that jointly administered programs are more likely to be located in larger institutions than are graduate programs that are not jointly administered with baccalaureate programs. Fifty-seven percent of "joint" programs are in institutions with at least 20,000 students enrolled as compared to 40% of graduate only programs and 6% of baccalaureate programs. Over one-half of the baccalaureate programs are in institutions with less than 5,000 students enrolled.

Number of Faculty

Graduate/joint programs have more faculty members than do baccalaureate programs, as displayed in Table 4. Almost 90% of baccalaureate programs have fewer than 10 faculty members. In comparison, no graduate/joint programs have that few faculty members, and nearly half have more than 30. No baccalaureate program has more than 30 faculty members, and all but one have less than 20.

TABLE 4

Number of Social Work Education Programs by Number of Faculty and Level of Program

Number of Faculty	LEVEL OF PROGRAM			
	Graduate Only	Joint	Baccalaureate	Total
Less than 10	0	0	181	181
10 - 19	8	12	21	41
20 - 29	9	17	1	27
30 - 39	6	11	0	17
40 - 49	5	8	0	13
50 - 59	3	4	0	7
60 and Over	4	2	0	6
Total	35	54	203	292

The mean number of faculty members for graduate/joint programs is 33.3. Last year it was 35.8, and the year before it was 40.4. This drop would have been affected by the addition this year of several newly accredited master's programs during the last two years. However, the total number of full-time as well as part-time faculty members in graduate/joint programs declined somewhat each of the last two years, despite the increased number of programs at that level. The mean number of faculty members in baccalaureate programs is 5:5, as compared to 5.9 last year and 6.7 the year before. This decline in the mean is influenced by the proliferation of newly accredited baccalaureate programs in recent years.

SOCIAL WORK FACULTY

Time in Social Work Education

As displayed in Table 5, about two-thirds of the faculty members with reported data at each educational level (graduate, joint, baccalaureate) are appointed full-time to the institution and spend 100% of their time in the social work program. A small additional percentage at each level are appointed full-time and spend at least half, but not all, of their time in the social work program. Less than 3% of the faculty members in graduate/joint programs spend less than half of their time in social work while holding full-time appointments. For baccalaureate programs, the analogous figure is 5.9%. The percentages displayed in Table 5 are very similar to those reported in each of the last two years.

TABLE 5

Faculty by Percent of Time in Social Work Education and Type of College/University Appointment

Percent of Time to Social Work	Type of College/ University Appointment	LEVEL OF PROGRAM							
		Graduate Only		Joint		Bacca-laureate		Total	
		No.	%	No.	%	No.	%	No.	%
100%	Full-time	829	66.1	1,143	66.7	739	66.6	2,711	66.5
50% - 99%	Full-time	15	1.2	29	1.7	38	3.4	82	2.0
	Part-time	54	4.3	70	4.1	60	5.4	184	4.5
25% - 49%	Full-time	7	0.6	14	0.8	38	3.4	59	1.4
	Part-time	74	5.9	85	5.0	93	8.4	252	6.2
Less than 25%	Full-time	18	1.4	25	1.5	28	2.5	71	1.7
	Part-time	192	15.3	149	8.7	73	6.6	414	10.2
Not Reported		65	5.2	198	11.6	41	3.7	304	7.5
Total		1,254	100.0	1,713	100.0	1,110	100.0	4,077	100.0

The distribution of time to baccalaureate and graduate social work education for faculty members in joint programs is displayed in Table 6. Marked changes have emerged in this table since last year. One has been a dramatic decrease in the proportion of faculty members assigned only to the graduate level. There had been a gradual trend in that direction in recent years, but never on this large a scale. Another marked change has been a large increase in the proportion assigned only to the baccalaureate level. This increase reverses a trend observed in recent years in which the "all to baccalaureate" category had dropped from 12.3% in 1978 to 5.9% in 1981.

TABLE 6

Faculty in Jointly Administered Programs by Time Assigned to Graduate and Baccalaureate Social Work Education (1982, 1981)

Time Assigned to Graduate and Baccalaureate Social Work Education	1982		1981		% Change
	No.	%	No.	%	
All to Graduate	398	23.2	1,003	50.5	-27.2
Most to Graduate	358	20.9	378	19.0	+ 1.9
Equal to Both	190	11.1	220	11.1	0
Most to Baccalaureate	121	7.1	192	9.7	- 2.6
All to Baccalaureate	378	22.1	117	5.9	+16.2
Not Reported	268	15.6	78	3.9	+11.7
Total	1,713	100.0	1,988	100.0	

Table 7 shows the percentage of time assigned to the doctoral level among full-time faculty in those graduate programs that report assigning some faculty members to doctoral education in social work. In these programs 63.2% of the full-time faculty have no teaching assignment at the doctoral level, and most of the rest spend less than one-fourth of their time at this level. The mean number of full-time faculty members per school spending at least half their time at the doctoral level is 2.31.

TABLE 7

Full-Time Faculty in Programs Offering Doctoral Social Work Education by Percentage of Time Assigned to Doctoral Level*

Percent of Time Assigned to Doctoral Level	No.	%
None	751	63.2
1 - 24	231	19.4
25 - 49	109	9.2
50 and Over	97	8.2
Total	1,188	100.0

* See Reference Table 300 for a school-by-school breakdown of full-time faculty.

Sex, Age, Ethnicity and Earned Degrees

Table 8 displays the distribution of male and female faculty members by age. The modal age category for all groups is 35-44. Baccalaureate faculty members are more likely to be in the younger age categories, while graduate/joint faculty members are more likely to be in the older ones. Women are more likely than men to be in the youngest category (under 35), while men are more likely to be in the 45-54 category. For all groups except women teaching in baccalaureate programs the percentage in the "under 35" category continues to decrease, a trend that was noted in last year's report.

TABLE 8

Faculty by Age, Sex, and Level of Program*

Level	Age	SEX					
		Male		Female		Total	
		No.	%	No.	%	No.	%
Graduate and Joint	Under 35	117	7.8	148	11.0	265	9.3
	35 - 44	509	33.8	473	35.2	982	34.5
	45 - 54	493	32.7	352	26.2	845	29.7
	55 and older	387	25.7	370	27.6	757	26.6
	Total	1,506	100.0	1,343	100.0	2,849	100.0
Bacca-laureate	Under 35	85	16.5	132	25.7	217	21.1
	35 - 44	236	45.7	219	42.6	455	44.2
	45 - 54	135	26.2	104	20.2	239	23.2
	55 and older	60	11.6	59	11.5	119	11.6
	Total	516	100.0	514	100.0	1,030	100.0

* Does not include 199 faculty members with missing data for sex or age.

Table 9 displays the percentages of male and female faculty members in various categories of ethnicity. The proportion of men and women of minority ethnicity has remained basically stable in recent years and currently is 22.4% in graduate and joint programs and 23.3% in baccalaureate programs. Most faculty members of minority ethnicity are Black. At both levels women continue to have a higher proportion of ethnic minority members than do men. This pattern is most pronounced each year among Black and Puerto Rican faculty members, especially in baccalaureate programs. A reverse pattern continues to hold for Chicano faculty members, whose percentage among men more than doubles their percentage among women.

* Does not include 41 faculty members with missing data for sex or ethnicity.

Table 10 displays the educational level and discipline of male and female faculty members. It shows that most graduate/joint program faculty members have earned higher than a master's degree, while about two-thirds of baccalaureate program faculty members have not. All but a small fraction of faculty members with no higher than the master's degree have their master's in social work. In graduate/joint program most doctorates are in social work, but in baccalaureate programs they are divided about evenly between

social work and other disciplines. The trend noted in recent years, toward an increasing percentage of faculty members at each level with doctoral degrees, continues again this year. In fact, this is the first year in which the majority of graduate/joint faculty members hold doctorates.

Table 10 also reveals some patterns that bear upon other differences between men and women, such as in rank, to be examined later in this report. For example, Table 10 shows that for graduate/joint programs the proportion of men holding doctorates (excluding medicine and law) is 59.9%, whereas for

women it is 39.5%. In baccalaureate programs the proportion of men holding doctorates is almost twice as high as the proportion of women. Although men are much more likely than women to hold doctorates, the proportion of women holding doctorates has been increasing more than the proportion of men, particularly for those teaching in graduate/joint programs, where the proportion of women now holding doctorates is almost twice as high as it was five years ago.

The percentages of faculty members holding different educational degrees are displayed for the various ethnic groups in Table 11. Asian

Americans have the highest percentage of doctorates, both at the graduate as well as the baccalaureate levels. Whites have the second highest percentage of doctorates, also at each educational level. The trend noted last year, toward an increasing percentage of Chicanos with doctorates, continues this year. At each educational level, the proportion of Chicanos with doctorates now is nearing the proportion of whites with doctorates. Puerto Ricans continue to have the lowest percentage of doctorates in graduate as well as baccalaureate programs. However, most Puerto Rican faculty members represented in these data teach in programs located in Puerto Rico, where very few social work faculty members hold doctorates. (In addition, programs located in Puerto Rico tend to have a much higher proportion of female faculty members and extremely lower salaries than most other programs. Conceivably this may bear upon how male-female differences in other areas of data should be interpreted.)

Table 12 shows the percentage of faculty members who hold master's degrees in social work by each category of highest earned degree. Well over 90% of those with doctorates in social work and the majority of those with doctorates in other disciplines also have a master's degree in social work.

Other	7.7	0.0

Rank

In recent years this report has observed a distinct trend in graduate/joint programs in which the percentage of faculty members in the modal rank of assistant professor has been decreasing while the percentage of associate professors has been increasing. That trend continues this year, and now the associate professor rank has become the mode in graduate/joint programs. As displayed in Table 13, graduate/joint faculty members

TABLE 13

and men (at both levels) are more likely to hold higher ranks than baccalaureate faculty members and women. The assistant professor category continues to be the mode for all baccalaureate faculty members and for women in graduate/joint programs. Differences in rank between men and women should be considered in light of their differences in level of degree and years on full-time faculty as displayed in Tables 10 and 17, and in light of the relationship between rank and level of degree, as displayed in Table 14.

* Does not include 137 faculty members with missing data for degree or rank.

Table 15 displays the distribution of rank by ethnicity. In graduate/joint programs the two ethnicity categories that earlier were shown to have the highest proportion of doctorates, namely Whites and Asian Americans, have the highest proportions of professors. Likewise, the group with the lowest proportion of doctorates, Puerto Ricans, also has the highest proportions of faculty members at lower academic ranks. By and large, the graduate/joint percentages in Table 14 do not differ dramatically from last year's figures, particularly in view of the small number of faculty members in some categories of ethnicity. While the differences are a little large in baccalaureate programs, the baccalaureate percentages should be viewed in light of the small number of faculty members upon which they are based and the fluctuating response rates annually from these programs.

Primary Responsibility

Data on primary responsibility were collected differently this year. In the past a faculty member's primary responsibility was indicated merely by checking one of the following categories: classroom; class and field; field; conducting research; or administration. This year, instead of a check, respondents reported the percentage of a full-time appointment assigned to classroom teaching, field teaching, field liaison, advisement, conducting research, committees, and administration. Primary responsibility is then defined as whichever one of those categories receives the highest percentage. This applied to all faculty members except those with formal administrative titles, such as dean or director. The primary responsibility for the latter was defined as their formal administrative title.

Because of the above change, this year's distributions of data on primary responsibility differ from previous years', and comparisons with prior years are not recommended regarding the categories of primary responsibility most affected by that change (namely, all categories except those involving formal administrative titles). Also, the above change increases the ways the data can be reported. Table 16 reports the data on primary responsibilities in the usual way, by the frequency of faculty members with each primary responsibility. Table 17 reports the data in a new way, by displaying the mean percentage assigned to each responsibility. The mean of every category of responsibility reported in Table 17 is based on <u>all</u> full-time faculty members, <u>not</u> just those assigned primarily to the given responsibility.

Table 16 shows that 71.3% of faculty members in graduate/joint programs and 62.9% of those in baccalaureate programs have teaching as their primary responsibility and that the bulk of them teach primarily in the classroom. Only about 3% of faculty members at each level have "class and field teaching" as their primary responsibility. This is substantially lower than in prior years because of this year's change in the way data on primary responsibility were collected. In the past, class and field would be checked if respondents estimated that a given faculty member's primary

duties were divided about evenly between class and field. This year, however, that category applied only if the percentages reported for classroom and field were exactly equal.

Table 16 also shows that women are more likely than men to have primary responsibilities in field instruction. Men are more likely to be deans or directors, but the disparity between the sexes in that regard may be diminishing somewhat. Last year women accounted for 25.6% of all reported deans/directors in graduate/joint programs, as compared to 29.9% this year. Table 17 shows that classroom teaching has, by far, the largest mean percentage of time assigned, and that all categories of primary responsibility have relatively large mean percentages assigned to it. Administration has the next highest mean percentage overall, but faculty members with other primary responsibilities on average are assigned relatively little to it. The most common secondary assignment for the bulk of faculty members--those whose primary responsibility is classroom or field instruction--is advisement, to which these instructors are assigned about 7% of their time.

Years on Full-Time Faculty

Table 18 shows how long full-time faculty members (who give at least 50% of their time to social work) have been continuously employed full-time in their current programs. A greater proportion of women than men have been hired recently. For example, the number hired last year in graduate/joint programs was 38 men and 44 women. In baccalaureate programs it was 22 men and 24 women. Since 1979 the number hired in graduate/joint programs was 219 men and 280 women. In baccalaureate programs it was 107 men and 139 women. Men have higher proportions among those hired much earlier. Table 17 also shows that baccalaureate faculty members tend to have been hired more recently than graduate/joint faculty members, although this is hardly surprising in view of the recent proliferation of new baccalaureate programs.

* Does not include 38 faculty members with missing data.

Tenure

The next two tables display the proportion of full-time faculty members with tenure. As in previous years, the proportion of faculty members with tenure has increased again this year. It is up from 56.8% to 61.1% in graduate/joint programs and from 40.6% to 46.6% in baccalaureate programs. Table 19 shows that the percentage with tenure is higher for faculty members with doctorates than for those without doctorates. Table 20 examines tenure in relation to rank, highest earned degree, and sex. Whereas Table 19 shows lower tenure percentages for faculty members with master's degrees, Table 20 shows that when rank is controlled full-time faculty members with master's degrees tend to have higher percentages with tenure than those with doctorate degrees, particularly at lower levels of rank. This relationship should be considered in light of the fact that faculty members without doctorates are more likely to have been hired much earlier than those with doctorates. Table 20 also shows that the percentage of tenured associate professors is higher for men than for women.

TABLE 19

Percentage of Full-Time Faculty with Tenure by Highest Earned Degree and Level of Program

Highest Earned Degree	LEVEL	
	Graduate and Joint	Baccalaureate
Master's		
Social Work	52.6	43.3

** Contains fewer than 10 cases.

Salary

The next three tables report data on mean salary of full-time faculty members assigned for at least 50% time to social work education. All salary data for faculty members whose primary responsibility is teaching are based on the 9-10 month academic year. If salaries of these faculty members were specified by respondents as covering more than 10 months they were reduced proportionately. The salaries of faculty members with primary responsibilities in administration are not included in the breakdowns by rank, so as not to inflate the mean salaries of those faculty members whose primary responsibility is teaching.

Table 21 presents the mean salary and standard deviation of full-time faculty members in the four principal academic ranks and for each of the 10 federal regions of the U.S. Department of Health and Human Services. The mean salaries for each rank follow the expected descending pattern from Professor to Instructor. This year's mean salaries tend to be about 6% to 8% higher than last year's. Regions 1 and 2 have the highest mean salaries for professors

TABLE 21

Mean Salary and Standard Deviation of Full-Time Non-Administrative Faculty by Rank, Geographic Region, and Level of Program

* See footnote to Table 1 for a list of states in each region.

** Assuming a normal distribution, about two-thirds of the cases will fall within plus or minus one standard deviation of the mean, and about 95% of the cases will be within plus or minus two standard deviations of the mean. For example, about two-thirds of non-administrative assistant professors in graduate/joint programs fall between $19,306 and $27,180, and about 95% are between $15,369 and $31,117.

*** Less than 5 cases reported.

and associate professors in graduate/joint programs. Regions 6 and 7 have the highest mean salaries for assistant professors in graduate/joint programs. Table 22 presents salary statistics for full-time faculty members with different primary responsibilities. Classroom instructor salaries are higher than field instructor salaries in graduate/joint programs, but not in baccalaureate programs. Administrators, particularly deans/directors and associate deans or directors, tend to have the highest mean salaries.

TABLE 22

Mean Salary of Full-Time Faculty by Primary Responsibility and Level of Program

Level	Primary Responsibility	Mean Salary	Standard Deviation*	Number With Salary Reported
Graduate and Joint	Class Teaching	$29,111	$6,813	988

	Dir. Field Instruction	21,923	4,484	86
	Other Administration	25,471	7,647	28

* Assuming a normal distribution, about two-thirds of the cases will be within plus or minus one standard deviation of the mean, and about 95% of the cases will be within plus or minus two standard deviations of the mean.

Salary in Relation to Sex and Ethnicity

Table 23 compares the mean salaries of men and women and of white and ethnic minority faculty members of the same rank, degree, and level of program. It includes only those instructors whose primary responsibility is classroom teaching because of disparities between the sexes in higher and lower paying job responsibilities. Of the 19 comparisons between men and women in Table 23 men are higher in 13 comparisons and women higher in six. As to the comparisons between white and ethnic minority faculty member salaries, whites are higher in 12 comparisons, and ethnic minorities are higher in five. (Readers are reminded that these statistics are reported for descriptive purposes, not explanatory purposes. Those seeking to explain causally the salary discrepancies reported above may want to consider other variables that potentially influence these discrepancies. In addition, the use of inferential statistics would be appropriate in testing postulated explanations.)

TABLE 23

Mean Salary of Full-Time Classroom Faculty by Rank, Ethnicity Highest Earned Degree, Sex, and Level of Program

Level of Program	Rank	Ethnicity	DEGREE AND SEX

Percentage of Salary From Internal University Sources Versus External Sources

This is the first year in which respondents were asked to indicate, beside each faculty member's salary, the percentage of that salary which came from internal university resources and the percentage supplied by external funding sources. In the past respondents were asked to report salary data for full-time faculty members, only, and many failed to report salaries for part-time faculty members this year. Data were missing on salary and/or the percentage from each source for 33.8% of the cases. For the roughly two-thirds of the cases that were reported, well over 90% of the funds came from internal university sources. The only groups whose salaries included a substantially larger percentage of external funds were those in graduate and joint programs who were full-time with primary responsibilities in field instruction or part-time with primary responsibilities other than teaching. Even for these two groups, however, the proportion of salaries coming from internal university sources exceeded 80%. No group in baccalaureate programs received more than 5% of its salaries from external sources. The above data are displayed in Table 24.

TABLE 24

Percentage of Salary from Internal University Sources by Level of Program, Primary Responsibility and Type of Appointment*

Level of Program	Primary Responsibility	Type of Appointment		Total
		Full-Time	Part-Time	
Graduate and Joint	Class Teaching	97.1	92.7

	(Number Reported)	(337)	(49)	
	Class and Field	100.0	**	
	(Number Reported)	(18)	(3)	
	Field Teaching or Liaison	100.0	**	
	(Number Reported)	(30)	(3)	
	Other	95.3	97.0	
	(Number Reported)	(327)	(30)	
	Total	95.9	96.2	96.0
		(712)	(85)	(797)

* This table is based upon data on 66.2% of the population of faculty members. Data on at least one of the variables in this table were not reported for 33.8% of the population. The most frequently missing data were on the salaries of part-time faculty and on the percentage from internal versus external sources.

**Less than 5 cases reported.

BACCALAUREATE STUDENTS

Baccalaureate student data were submitted by 282 (87.3%) of the 323 baccalaureate programs accredited at the time of the canvass. Table 25 displays the distribution of the 282 respondent programs by the size of their junior and senior enrollments. Institutions vary in when majors are declared; therefore, only the junior and senior years are examined when comparing enrollment sizes. Most baccalaureate programs have less than 50 students in their junior or senior year. The median junior/senior year enrollment is 39.8. This is lower than last year's median of 47.4, which in turn was lower than the previous year's median of 60.5. This may reflect declining enrollments. It also may reflect the continuing annual introduction of new baccalaureate programs with small enrollments.

The total reported enrollment of full-time degree students (including those in their freshman and sophomore years) is 21,918. Of these, 14,567 are in their junior or senior year, and 7,351 are in their freshman or sophomore year. An additional 3,046 part-time degree students were reported, as well as 11,524 other students taking social work courses.

As was the case last year, the enrollment of full-time degree students decreased since last year. The total number of full-time degree students fell by 17.6% (from 26,602). The number in the freshman or sophomore year fell by 22.2%, and the number in the junior or senior year fell by 10.8%. This occurred while the response rate from baccalaureate programs stayed about the same as last year. (It rose by an increment of 0.5%). Also, the raw number of baccalaureate programs responding increased by 7.2%. Therefore, even if most of this increase may have come from relatively new, small programs, the current figures may underestimate the real decrease in the population of full-time baccalaureate students since last year. In this connection, it is important to consider that the decrease in full-time freshman/sophomore enrollments continues to outpace the decrease in full-time junior/senior enrollments, and the proportion of total full-time enrollments accounted for by juniors and seniors continues to grow. This suggests that the declines in full-time enrollments may continue to accelerate in the near future, as the decrease in classes about to graduate is less than it is among students who will replenish those classes in coming years. Moreover, the drop in full-time enrollments has

not been offset by any rise in part-time enrollments, which actually fell slightly since last year (from 3,107 to 3,046). The only increase in the baccalaureate enrollment figures reported thus far has been in the number of non-degree students from other departments taking social work courses (from 10,961 last year to 11,524 this year). However, this figure has fluctuated in recent years, and the current level is slightly lower than it was two years ago, when only 219 programs reported.

TABLE 25

Accredited Baccalaureate Programs by Size of Full-Time Junior and Senior Year Enrollment

Junior and Senior Enrollment	No.	%
Under 25	77	27.3
25 - 49	94	33.3

75 - 99	27	9.6
100 - 149	18	6.4
150 and Over	10	3.5
Total	282	100.0
Median	39.8	

An area of data collected for the first time this year, on the maximum number of students permitted to enroll per course section of the major curriculum sequences, is displayed in Table 26. The sequence with the lowest maximums is field, with a mean of 17.1 and a mode of 11-15. The sequence with the highest maximums is HBSE with a mean of 30.1 and a mode of more than 30. For each sequence, a substantial minority of programs either reported that they had no maximum or failed to report anything in the corresponding area of the questionnaire. Conceivably many of those not reporting have no maximum, but failed to indicate so. When respondents indicated that they have no maximum the most frequent explanations given

were either that their enrollments are so small that the concept of maximums never came up to begin with or that required courses for the referent sequence are taken outside of the social work department.

TABLE 26

Maximum Number of Students Permitted To Enroll Per Course Section, By Sequence and Number of Programs

Maximum Enrollment Size	SEQUENCE

MEAN	17.1		22.3		30.1		29.4		28.2	

Table 27 displays the breakdown by sex of full-time junior and senior enrollments and of students awarded degrees. In previous years this table included freshman and sophomore enrollments, as well. Despite that deletion this year the proportion of women (85%) among those enrolled is about the same as it was last year and the year before. The proportion of women among students awarded degrees rose very slightly since last year, from 84.1% to 85.9%.

Table 28 displays the ethnic distribution of full-time junior and senior enrollments and of students awarded degrees. Like the previous Table,

this one also included freshman and sophomore enrollments in prior years. The proportion of whites among students enrolled has remained relatively stable in recent years -- in the 67% to 70% range. They comprise a higher proportion (75.5%) of students awarded degrees, up from 71.6% last year. The largest group of ethnic minority students is Black. Small yearly changes in the proportions of specific categories of ethnicity should be viewed cautiously, because they may be heavily influenced by annual fluctuations in which baccalaureate programs respond. This applies particularly to programs with large proportions of minority enrollments, such as those in institutions with ethnic affiliations or those located in Puerto Rico or Hawaii, which may respond one year, but not another.

GRADUATE STUDENTS

Enrollment

The number of students enrolled full-time in master's programs increased every year between 1955 and 1978. The number enrolled in 1978 was almost five times the number enrolled in 1955 (which was 3,569). Then in 1979 the master's enrollment level began to drop, and this year's enrollment figures show that the recent enrollment decline has begun to accelerate. This trend is displayed in Table 29. Like master's programs, full-time enrollments in doctoral programs also increased rather steadily until the late 1970s. They fluctuated between 1977 and 1980, and have increased each of the last two years. The current number of students enrolled full-time in doctoral programs is still less than the number enrolled in 1979.

As the number of students enrolled full-time has declined, the number of students enrolled part-time has been increasing. The number of students enrolled part-time in master's programs in 1982 was 6,174, 6.7% higher than the 5,761 enrolled in 1981. This increase of 413 part-time

TABLE 29

Full-Time Students Enrolled in Master's and Doctoral Programs, 1957-1982

Year	Master's Programs	Doctoral Programs	Year	Master's Programs	Doctoral Programs

1968	10,847	307	1981	16,552	868
1969	11,711	450	1982	15,131	922

*One school not reported.

master's students partially offsets the decline of 1,421 in full-time enrollments. The number of students enrolled part-time in doctoral programs (798) is only 4 more than last year. Part-time students now comprise 29% of all master's enrollments and 46.4% of all doctoral enrollments.

Applications and Admissions to Master's Degree Programs

The decline in applications for admission to master's programs, which has continued every year since 1975, accelerated dramatically this year. Table 30 shows that the total number of applications (full-time plus part-time) in 1982 was 5,563 less than in 1981. This is a drop of 21.1%. This year's decline is by far the steepest yearly drop since the decline began in 1975 and is almost 2½ times as large as last year's drop of 8.7%. In 1975 there were 41,046 applications, about twice as many as the 20,786 received this year. Perhaps the most troubling aspect of this trend is that the decline in absolute numbers from year to year has not been diminishing as the applicant pool grows smaller and smaller. For example, this year's decline of 5,563 more than doubles last year's decline of 2,503, which, in turn was greater than the previous year's decline of 2,102. In fact, since 1978, in only four year, there has been a decline of 14,813 applications. If this pace continues, by 1986 there will be only 5,973 applications, and perhaps hardly any a few years thereafter. One can speculate that the current slope of the decline cannot continue much longer--that sometime soon there must be a leveling off in the decline, with the annual decreases occurring in smaller increments. That hoped-for leveling off, however, has of yet shown no sign of emerging. Instead, the slope of the decline is steepening. It is conceivable that the number of individual applicants is declining less than the number of schools to which they apply. For example, as financial aid becomes scarcer, applicants may be becoming more selective about which schools they can afford to attend--perhaps applying only to those near their current residences. If so, then the decline may level off in the near future, assuming no major changes in the current fiscal and economic scenario. However, that is just one possibility--additional data would need to be gathered to assess the degree to which the current decline represents fewer applicants versus fewer applications per applicant.

As the number of applications has dwindled, the percentage of applications accepted has swelled. Over 70% of applications received in 1982 were accepted, as compared to about 40% in 1976 and two-thirds last year. The percentage of applications accepted should be considered in the context of the growth of part-time degree programs. This is the first year that applications and admissions figures were separated for full-time and part-time degree programs. As shown in Table 30, the percentage of applications accepted in part-time programs (76.9%) is higher than in full-time programs (68.6%). Table 30 also shows that a much higher percentage of accepted applicants in part-time programs eventually register.

There is one remaining feature of Table 30 worth highlighting. It is the absolute number of applications accepted and registered in 1981 and 1982. Until this year, in the face of markedly diminishing applications, the number of applications accepted has tended to either increase or decrease very slightly. This year's drop of almost 3,000 accepted applications sharply contrasts with the recent trend and may suggest that programs (especially full-time programs) may be reluctant to continue inflating the acceptance ratio as applications decline. This year's drop of 1,350 in the number of registered applicants also is many times greater than the fluctuations of recent years.

TABLE 30

Applications for Admission to First-Year Master's Degree Programs in 1981 and 1982, by Action Taken

Action	1981		1982					
			Full-time Programs		Part-time Programs		Total 1982	
	No.	%	No.	%	No.	%	No.	%
Total Received	26,349	100.0	16,066	100.0	4,720	100.0	20,786	100.0
Considered for Admission	24,180	91.8	14,501	90.3	4,323	91.6	18,824	90.6
Accepted	17,571	66.7	11,020	68.6	3,631	76.9	14,651	70.5
Registered	10,685	40.6	6,277	39.1	3,059	64.8	9,335	44.9

1982 was the third consecutive year that the decline in applications for first-year status was accompanied by a decline in applications for advanced standing status. However, the decline this year was very slight--down from 2,342 total applications in 1981 to 2,318 in 1982. The percentage accepted and enrolled increased considerably since 1981. The percentage accepted went from 73.4% to 78.1% and the percentage enrolled rose from 52.9% to 61.9%. In fact, the absolute total numbers accepted and enrolled in 1982 are larger than in 1981. Table 31 displays the 1982 data on applications for advanced standing. Most of these applications come from graduates of BSW programs, almost one-third of which are under the auspices of the school receiving the application. Applications from the BSW program in the same school as the master's program have the highest rate of acceptance and enrollment.

TABLE 31

Applications for Advanced Standing Status in Master's Degree Programs in 1981, by Source/Basis and Action Taken

Action	SOURCE OR BASIS							
	Baccalaureate Social Work				Other Education		Total	
	Own School		Other School					
	No.	%	No.	%	No.	%	No.	%
Received	611	100.0	1,344	100.0	363	100.0	2,318	100.0
Accepted	503	82.3	1,024	76.2	283	78.0	1,810	78.1
Enrolled	454	74.3	751	55.9	231	63.6	1,436	61.9

Degrees Awarded

Accompanying the decline in applications and enrollments at the master's level is the continuing decline in the number of master's degrees awarded. The number of doctoral degrees awarded, however, continues to increase. The rise between 1981 and 1982 in the number of doctoral degrees

awarded was 20.5%, the largest annual increase since 1973. Table 32 displays these trends in degrees awarded.

TABLE 32

Graduate Students Receiving Master's and Doctoral Degrees, Academic Year 1956-57 Through 1981-82

Academic Year	Master's Degree	Doctoral Degree	Academic Year	Master's Degree	Doctoral Degree

*One School Not Reported.

Characteristics of Graduate Students

The growth in the percentage of women enrolled and receiving degrees at every level of social work education continued again this year for every category except doctoral students enrolled. Table 33 shows that the percentage of women enrolled in master's programs rose by one-half of one percent since last year, and the percentage of women receiving master's degrees is 3.8 points higher. The percentage of women receiving doctoral degrees rose by 1.4 points, while the percentage of women enrolled in doctoral programs declined by 0.7 points.

The age distribution of male and female graduate students, displayed in Table 34, has remained fairly stable in recent years. For women who are enrolled full-time in master's programs, the modal age category is under 26,

TABLE 33

Percentage of Full- and Part-Time Master's and Full-Time Doctoral Students Enrolled 10/1/82, and Students Awarded Degrees 1981-82, by Sex

	Enrolled			Awarded Master's Degrees	Enrolled	Awarded Doctoral Degrees
	Full-Time	Part-Time	Total			
Male	20.8	20.9	20.8	21.4	43.0	43.7
Female	79.2	79.1	79.2	78.6	57.0	56.3
TOTAL:						
Number	15,131	6,174	21,305	9,556	922	284
Percent	100.0	100.0	100.0	100.0	100.0	100.0

TABLE 34

Percentage of Master's and Full-Time Doctoral Students Enrolled 10/1/82, by Age and Sex

Age	Sex	Master's Students		Doctoral Students
		Full-Time	Part-Time	
Under 26	Male	5.1	2.1	0.8
	Female	27.1	12.6	1.7
26-30	Male	7.3	6.5	9.4
	Female	20.8	20.7	10.2
31-40	Male	6.3	9.2	25.5
	Female	19.9	30.1	29.6
Over 40	Male	1.9	2.6	7.3
	Female	10.6	13.8	15.5
Not Reported	Male	0.2	0.5	0.0
	Female	0.8	1.9	0.0
Total	Male	20.8	20.9	43.0
	Female	79.2	79.1	57.0
TOTAL	Number	15,131	6,174	922
	Percent	100.0	100.0	100.0

with descending percentages in order of the increasing age categories. For men enrolled full-time in master's programs, the modal age category is 26-30. Also, the proportion of men in the 31-40 category is higher than the proportion of women. Part-time master's students tend to be a little older than full-time students. For both men and women enrolled part-time the modal age category is 31-40, and the youngest age category (under 26) has the lowest percentage of part-time students. The same is true for doctoral students, who also tend to be older.

Table 35 displays the ethnicity of graduate students enrolled and awarded degrees. This distribution has not changed much in the last few years. The most notable change this year is a drop of seven points in the percentage of Blacks receiving doctoral degrees. The proportion of ethnic minorities among full-time students in master's and doctoral programs continues to exceed their proportion among part-time students.

TABLE 35

Type of Concentration

The next two tables display the distribution of all master's students by their primary classroom concentration. The first of these tables breaks down concentration into methods categories. It shows how many students are concentrating in each method either by itself (as a methods only concentration) or in combination with a field of practice or social problem concentration. The subsequent table then shows how the students taking field of practice or social problem concentrations (alone or in combination with a methods concentration) are distributed across the field of practice and social problem categories. In other words, the same 21,305 students are distributed twice--once in Table 36 and then again in Table 37.

It is important to note that these two tables on concentrations include all master's students, full-time as well as part-time and first-year as well as second-year. This year marks the first time this approach has been taken to describing data on concentrations. The change resulted from input from member programs identifying this as a problematic area of data in the canvass and report and requesting a revised reportage framework that would more closely reflect the vast diversity in the way different schools define their concentrations. Because of that diversity this report cautions each year that tabulating the concentration data involves frequent use of judgment as to which category best applies to a particular program and that this area of data is relatively "soft," compared with the rest of the report. These problems are reflected in the large proportions of students in the "other" and "not reported" categories of the tables on concentrations.

Table 36 shows that 89.3% of all master's students have a methods concentration and that 56.6% have nothing but a methods concentration, while almost one-third take a methods concentration in combination with a field of practice or social problem concentration. By far the most prominent methods concentration is in the micro category, which accounts for 53.4% of all students. The generic, multi-method category is next in prominence, with 20.1% of all students. All other methods categories combined add up to only 15.9%.

Table 37 shows that mental health and health are clearly the most prominent field of practice or social problem concentrations. Next come family services and child welfare. Heading the list of those categories much farther behind the above are aging, community planning, corrections, and school social work, in that order. However, each of these latter four categories accounts for only 1% to 1.6% of the students.

Field of Practice in Field Instruction

Data on field of practice in field instruction were collected this year on the same form that requested data on classroom concentrations in fields of practice or social problems. Many respondents had difficulty with this year's format, as reflected in the large proportion of students whose

field of practice in field instruction was not reported or who were reported as "none or not yet assigned" to field instruction. The latter figure more than doubled last year's percentage in the none or not yet assigned category, and may have been additionally influenced by the decision to collect the data as of October 1, a month earlier than in previous years. The proportions of students in the remaining categories also differ markedly from last year. In view of this year's changes in the data collection format, and the problems connected with it, caution is advised in utilizing this year's data on field of practice in field instruction and in comparing these data to previous years. This year's figures are displayed in Table 38.

TABLE 38

Master's Degree Students Enrolled 10/1/82 by Primary Field of Practice in Field Instruction

TOTAL	21,305	100.0

Financial Aid

Table 39 reports the proportion of students in each ethnic group receiving financial aid. Percentages were calculated in reference to the number of students enrolled full-time within each given ethnic group. For full-time master's students 44.3% are receiving grants, as compared to 54.0% of full-time doctoral students. Table 39 also shows that ethnic minority students are much more likely to receive financial aid than are white students. The ethnic minority groups with the lowest percentage of aid recipients (as compared to other ethnic minorities) are Asian Americans in master's programs and Blacks in doctoral programs. Comparisons of these data with previous years would be inappropriate because of the expansion this year in the definition of financial aid and its response categories, which now include (for the first time) formal loan programs, work study, research or graduate assistantships, and aid paid directly by field instruction agencies. This expansion probably explains why the percentage of full-time master's students receiving financial aid (44.3%) is so much higher than last year, when it was 33.6%.

TABLE 39

Full-Time Master's and Doctoral Students Receiving Financial Grants 10/1/82, by Ethnicity

Ethnicity	Master's Students		Doctoral Students	
	No.	%	No.	%
Asian American	82	35.0	16	80.0
Black	1,001	96.8	78	60.0
Chicano	184	63.7	13	72.2
Native American	57	68.7	4	66.7

TOTAL	6,701	44.3	502	54.0

Table 40 displays the number of financial grants awarded in 1982 and the sources of the grants. Almost 11% of all grants awarded to master's students are paid directly by field instruction agencies. Funds paid by these agencies come from a wide variety of sources. The most common federal source is the VA, followed by NIMH, Child Welfare and "other." More than one-fourth of field agency grants come from work study funds. Other prominent sources are voluntary social welfare agencies and state or local governments. The most common federal source of funds not tied to field instruction is NIMH. Disregarding whether funds are tied to field instruction, however, the most common source of funds is formal loan programs, accounting for 34.2% of the grants awarded to master's students. The next most prominent source overall is the school or university, accounting for 21.9% of the funds. Then comes work study funds, at 12.8%. For doctoral students, the most common source of funds is the school or university, accounting for almost one-third of the grants. Research or graduate assistantships add another 20.9%, and formal loan programs add 10.6%. The most prominent federal source of funds for doctoral students, by far, is NIMH.

Maximum Number of Students Permitted Per Section

As reported in the section on baccalaureate students, this is the first year in which data were collected on the maximum number of students permitted to enroll per course section of the major curriculum sequences. A school-by-school breakdown of those data for master's programs are displayed later in this report, in Reference Table 205. This section of the narrative aims to remind readers of that new reference table and to summarize it. The mean maximum number of students permitted to enroll per section in master's courses is 17.4 for field seminars, 22.4 for practice courses in the classroom, 30.1 for HBSE, 30.3 for policy and 26.1 for research. More than half of the programs report no maximum for field seminars. These programs are divided about equally between those that specify that they have no maximum and those that consider this issue as not applicable to them. In each of the other sequences less than 10% of the programs specify that they have no maximum, and even fewer report "not applicable". The maximums reported for master's programs are very close to those that were reported earlier on baccalaureate programs.

TABLE 40

Financial Grants Awarded to Full-Time Master's and Doctoral Students in 1982, by Source of Funds

SOURCE OF FUNDS	TO MASTER'S STUDENTS						To Doctoral Students

Student-Faculty Ratios

Data on student-faculty ratios are displayed in Table 41. In calculating the total number of students per program for these ratios part-time students were counted as one-half, and each faculty member was counted according to the precise full-time equivalent percentage of time he or she is assigned to the doctoral or master's level as reported by respondents. For example, a full-time faculty member teaching 50% at each level would be counted as 50% at each level. Likewise, half-time faculty members dividing their time equally between the two levels would be counted as 25% at each level, and so on. For master's programs the range of student-faculty ratios is 5.26 to 19.79, and the median is 10.15. For doctoral programs, the range is from 2.0 to 37.2. Doctoral programs have a lower median (7.86) than do master's programs, and most doctoral programs have ratios below 8.0.

TABLE 41

Student-Faculty Ratios in Master's and Doctoral Programs, 10/1/82

Student-Faculty Ratio	Master's Programs		Doctoral Programs

60

RECENT TRENDS IN SOCIAL WORK EDUCATION

This section of the report highlights selected five-year trends, as displayed in Tables 42 and 43. Table 42 displays the trend data for baccalaureate programs. The footnote to this table, about changes in response rates each year, is important. Fluctuations in the data could be caused by changing response rates. The response rates in 1981 and 1982 were higher than in 1979 and 1980. Therefore, recent decreases in enrollments probably not only are real, but perhaps are greater than indicated in Table 42. Consequently, the most notable trend in Table 42 appears to be the decline in the number of full-time degree students taking social work courses. Other stable trends include an increasing percentage of faculty members with doctoral degrees, an increasing percentage of female students, and an increasing percentage of juniors and seniors among full-time degree students.

Table 43 displays the trend data for graduate programs. One important trend is the continuing decline in the number of applications for admission to master's programs for first-year status, which declined by 21.1% since the last year and is almost 50% lower than it was in 1975. Applications for advanced standing status also are declining. Meanwhile, the percentage of accepted applications for first-year status continues to increase. Another important trend is the decreasing number of students enrolled full-time in master's programs, which fell by 8.6% since last year. This has been accompanied by an increasing number of part-time students and a decreasing number of students awarded master's degrees. The percentage of ethnic minorities enrolled in and graduating from master's programs appears to be declining, while the percentage of women enrolled and receiving degrees continues to increase. As for doctoral programs, the stablest trends involve the growing number of degrees awarded and the increasing percentage of women receiving them. Table 43 also displays some stable trends regarding faculty, including recent reductions in the total number of faculty, an increasing proportion of faculty members with doctoral degrees, an increasing percentage of faculty members who are of minority ethnicity, and an increasing proportion of women among assistant professors.

TABLE 42

Highlights of Recent Trends in Baccalaureate Social Work Education*

	1978	1979	1980	1981	1982
Accredited Baccalaureate Programs					
Baccalaureate Only	181	201	214	253	269
Joint	47	46	47	48	54
Institutional Auspices					
% Public	56.2	57.8	57.4	52.4	54.0
% Private	43.8	42.2	42.6	47.6	46.0
Faculty (Baccalaureate Only)					
Total Number	1,297	1,138	1,262	1,327	1,110
% Women	50.4	51.5	51.8	51.2	50.2
% Ethnic Minority	25.7	25.5	23.6	25.2	23.3
% Doctorates	22.5	21.4	23.5	28.8	31.1
Students					
Full-Time Degree Students	29,350	27,996	27,051	26,602	21,918
% Women	81.1	82.8	84.7	84.6	85.0
% Ethnic Minority	31.0	30.2	30.0	31.6	28.7
% Juniors or Seniors	62.7	61.9	62.1	63.3	66.5
Part-Time Degree Students	4,037	3,770	3,059	3,107	3,046
Others Taking Social Work Work Courses	13,595	12,181	11,686	10,961	11,524
Degrees Awarded	9,277	8,132	7,971	8,342	7,802
% Women	77.7	82.1	84.2	84.1	85.9
% Ethnic Minority	25.4	28.0	26.3	27.4	24.0

* These trends should be interpreted cautiously, because of variations in response rates from year to year among baccalaureate programs. The lowest response rates occurred in 1979 and 1980.
